Surface Preparation

- Remove all loose, defective paint or powdery residues by wire brushing, scraping, or high pressure water jet. Treat any areas affected by fungus growth with fungicidal wash solution and left dry before painting. Repair cracks, uneven surfaces with putty or suitable fillers. Smoothen the putty areas with sandpaper. Make sure all surfaces are dry before painting. Avoid painting when the moisture content of the walls are still high. (Recommended painting specification requires the moisture content of the walls to be below 16% measured by Protimeter)
